

I drive for a living driving through Chicago Il. several times per month and with XM instant traffic/weather. I can stay informed of current condition without searching for a chicago station, for a market that I don't use enough or know the location of the channels on the dial. And then the chicago station may not give the information that I am looking for or may not give traffic at all. Another benefit is that I can listen to the weather part before I depart so I can better plan my trip. This way I can better utilize my time so I can be more productive. In closing I hope you leave my XM the way it is.

Thank You  
John VanDenBerg
